

HR Analytics for Insurance

Agent Performance, Productivity & Retention Analysis

STUDENT NAME:

Roshitha

Introduction to HR Analytics

What is HR Analytics?

- Using data to make better HR decisions
- Tracks employee performance and activity
- Identifies problems before they get worse
- Replaces guesswork with facts
- Also called People Analytics or Workforce Analytics

Why Important in Insurance?

- Agents are the main revenue source
- High attrition costs time and money
- Performance varies widely across agents
- Early warnings prevent agent dropout
- Helps managers take smarter action

Problem Statement

High Agent Attrition

- Insurance industry loses 30–50% agents yearly
- Replacing an agent is costly & time-consuming
- Out of 30 agents, ~14 are already Inactive
- Loss of experienced agents = loss of revenue

Low Productivity

- Many calls do not convert to meetings
- Meetings fail to result in proposals
- Agents are working hard but not smartly
- No targeted training to fix weak areas

Uneven Performance

- Only 10% of agents are Star Performers
- 50% of agents are Low Performers
- Small group drives majority of FYP revenue
- Performance gap is wide and unaddressed

Project Objectives

01

Improve Agent Productivity

- Analyse the sales activity funnel
- Calculate conversion rates at each stage
- Identify where agents lose business
- Suggest ways to reduce funnel leakage

02

Identify Performance Gaps

- Segment agents into Star, Average, Low
- Use FYP data and percentile method
- Find which agents need training
- Apply the 80/20 Pareto principle

03

Predict Retention Risk

- Classify agents as Low / Medium / High risk
- Use last month's meeting and sales data
- Alert managers before agents leave
- Save recruitment and training costs

Data Used in This Project

Agent Master

30 agents — basic profile data

- Agent ID & Name
- Join Date & License Date
- Region: North/South/East/West
- Status: Active / Inactive

Performance Data

30 agents — total FYP & classification

- Total FYP per agent
- Percentile thresholds (50th & 90th)
- Star / Average / Low labels
- Distribution: 10% / 40% / 50%

Activity Log

130 records — monthly activity data

- Calls, Meetings, Proposals, Sales
- FYP (First Year Premium)
- Meeting Rate & Proposal Rate
- Sales Conversion + Problem Label

Retention Data

130 records — risk classification

- Meetings last month
- Sales last month
- Risk: Low / Medium / High
- 87.7% Low Risk, 12.3% Medium Risk

★ All data stored in a single Microsoft Excel workbook with multiple sheets

Productivity Analysis — Activity Funnel

CALLS

~115 / month

MEETINGS

~27 / month | Conv. Rate: 23.5%

PROPOSALS

~13 / month | Conv. Rate: 48%

SALES + FYP

~8 sales | Conv. 62%
| Avg FYP ₹34,000

⚠ Funnel Leakage: 35% of records show Poor Communication (Calls → Meetings) — the biggest productivity gap!

Agent Performance Segmentation

■ ★ Star (10%) ■ 📊 Average (40%) ■ 📉 Low (50%)

★ Star Performers

10%

3 Agents | FYP $\geq$ ₹1,93,090

Top: A107 — ₹2,14,870

📊 Average Performers

40%

12 Agents | FYP ₹1,52,424 – ₹1,93,089

Biggest growth opportunity

📉 Low Performers

50%

15 Agents | FYP $<$ ₹1,52,424

Needs immediate training

Method: Excel PERCENTILE function — 50th percentile = Average threshold, 90th percentile = Star threshold

Retention Analysis — Risk Classification

Records by Risk Category (Total: 130)

LOW RISK 87.7% (114 records)

Rule: Meetings ≥ 10 last month

Action: Regular recognition & motivation

MEDIUM RISK 12.3% (16 records)

Rule: Meetings < 10 last month

Action: Weekly check-in & training offer

HIGH RISK 0.0% (0 records)

Rule: Meetings < 5 AND Sales = 0

Action: Urgent manager intervention needed

Good News: Currently ZERO High-Risk agents — but Medium-Risk agents need close monitoring every month!

Dashboard Overview — Excel KPIs & Charts

30

Total Agents

₹45.1L

Total FYP Generated

10%

Star Performers

16

Medium Risk Agents

Charts Included in Dashboard:

Performance Distribution

Pie chart showing Star 10% / Average 40% / Low 50% split

Problem Distribution

Bar chart: Poor Communication 35% / Poor Closing 24% / Pitching 13%

Retention Risk Chart

Bar chart: Low Risk 114 / Medium Risk 16 / High Risk 0 agents

Top Agents by FYP

Bar chart listing top 10 agents ranked by total FYP earned

Key Insights from the Analysis

01

Half the Workforce is Underperforming

- 50% of agents are Low Performers (FYP below median of ₹1,52,424)
- This is a major productivity gap requiring urgent action
- Lowest agent earned only ₹87,974 vs top agent's ₹2,14,870

02

Small Group Drives Most Revenue

- Only 10% (3 agents) are Star Performers — Pareto Principle in action
- If even 1 star agent leaves, revenue impact is disproportionate
- Top agents must be actively retained with incentives and recognition

03

Communication is the Biggest Bottleneck

- 35.4% of records flagged as 'Poor Communication' (calls to meetings)
- This is the #1 training priority for the HR team
- Fixing this one gap could significantly improve overall FYP

04

Retention Risk is Currently Manageable

- 87.7% of records are Low Risk — workforce is mostly stable
- 16 Medium Risk records (12.3%) need immediate manager attention
- Zero High-Risk agents — but monthly monitoring is essential

Recommendations & Action Plan

Training for Low Performers

- Communication workshop for agents with Meeting Rate < 20%
- Consultative selling training for agents with poor closing
- Role-play exercises for proposal & pitching skills
- Pair each low performer with a Star Performer as mentor

Retain Top Performers

- Offer competitive commission & performance bonuses
- Publicly recognise star agents in team meetings & awards
- Discuss career growth paths (Team Leader, Trainer roles)
- Introduce annual retention bonus for long-serving top agents

Monitor Medium-Risk Agents

- Weekly 15-minute check-in call from branch manager
- Set small weekly goals to rebuild confidence
- Investigate root cause: personal issue or skill gap?
- Offer training as a positive opportunity, not a penalty

Key Principle: Personalised support, not generic training — use the data to target the right help to the right agent.

Conclusion

Project Summary

- Analysed 30 agents and 130 activity records using Microsoft Excel
- Built activity funnel, performance segmentation, and retention risk model
- Found: 50% Low Performers, 10% Stars, 35% with communication gaps
- Recommended: targeted training, top agent retention, and medium-risk monitoring

Why HR Analytics Matters:

- Replaces guesswork with data-driven decisions for HR and managers
- Identifies problems early — before they cost revenue or cause attrition
- Even basic Excel analysis can drive real, measurable business improvements
